

Visualizations

First Gaze plot.

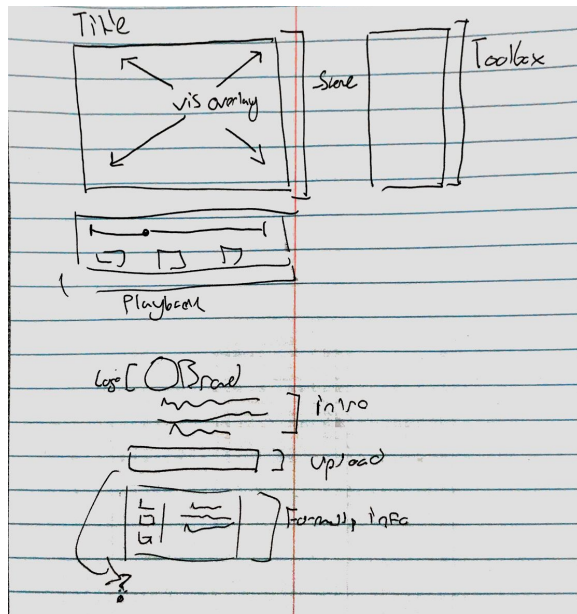

Removed null points

Still have duplicate points that are not necessary

Need to add sequence numbers to circles

Change size of circles depending on frequency

Design of Site:

Wireframing session:

- Trying to figure out layout and functions. Why are things placed where they are?

- Do we need backend in PHP? Benefits?

Advantages?

- Notes:

How will our site deal with responsive content. If a stage is finite, and data refers to actual pixels, we will need to handle scaling intelligently. For larger scenes (websites) we cannot scale the image and data elegantly. We will need to dynamically change domain/range based on scene AND viewport.
